Re: 2012-2013 Biennial Evaluation of Connecticut's Inspection and Maintenance Program and
2013 Annual Data

Dear Mr. Conroy:

I am pleased to submit the enclosed *2012-2013 Biennial Evaluation of Connecticut's Inspection and Maintenance Program and 2013 Annual Data* (Report), which fulfills the Environmental Protection Agency's (EPA) requirements to provide annual and biennial evaluations of a state's inspection and maintenance (I/M) program in accordance with 40 CFR 51.366.

This Report addresses data collected from January 1, 2012 to December 31, 2013. It comports with requirements that have been established by the EPA and addresses the EPA's recommendations on the previous report, as outlined in the attached letter dated November 26, 2013. This Report compares and contrasts the testing results of the most recent two years of testing, outlines the programmatic changes made during the past year, and includes the EPA requested information on diesel testing, although this last element is not a requirement. This Report is composed of three sections, including:

- An evaluation of the data;
- Appendix A, containing the EPA-provided checklist for the annual and biennial reports, identifying the data elements required to be included in this evaluation; and
- Appendix B, containing the 2013 data. The data are compiled in and correspond to the indexing system used in EPA's checklist. The 2012 data were submitted last year.

The I/M program is an important part of Connecticut's Ozone Attainment Strategy. Connecticut's program, which dates back to 1983, has a long history of effectively reducing vehicle emissions and results in more emission reductions than any other emissions reduction strategy. Current estimates indicate that in 2010, this program would have provided approximately 19 of the 200 tons per day of air pollutant reductions that are included in Connecticut's 2008 Ozone Attainment Demonstration. Continued demonstration that this program maintains such significant and justifiable programmatic emission credits in MOVES is important as Connecticut evaluates options for a cost effective program for the future.
